Underground Drilling of the North Zone Commences with Completion of Decline QR Mine, British Columbia

December 10, 2007 - Vancouver, British Columbia - Cross Lake Minerals Ltd. (the "Company" or "Cross Lake") is pleased to announce the completion of the North Zone decline at a length of 720 meters and the commencement of underground diamond drilling. The North Zone, a faulted extension of the Main Zone, has been tested by wide spaced drilling over a strike length of approximately 600 meters. It is located at a vertical depth of 200 to 400 meters with the west end of the zone directly below the QR Mill facilities. The North Zone is a high priority target for Cross Lake, as it is the only zone that has not been limited by faulting and, as such, is the largest zone of gold mineralization currently known on the Property and has the best potential to significantly increase the current QR Mine resource and operating life. The following table summarizes the significant intersections from previous drilling of the North Zone as reported in a previous press release in November 2004:

Hole #	From (m)	To (m)	Width (m)	Gold (g/t)
55	481.00	484.60	3.60	7.22
164	297.00	315.00	18.00	2.46
including	299.00	302.00	3.00	5.32
and	309.00	313.00	4.00	3.60
182	289.00	304.00	15.00	10.45
269	282.00	284.00	2.00	16.00
and	415.00	418.00	5.03	3.00
270	283.00	287.00	4.00	4.58
and	288.00	290.00	2.00	13.19
277	396.00	399.00	3.00	9.65
and	405.00	407.00	2.00	3.99
282	259.00	261.00	2.00	3.85
303	375.00	380.00	5.00	7.53
474	246.00	262.00	16.00	7.23
496	402.95	412.95	9.19	4.91
CL-03-2000	240.50	249.50	9.00	3.87
and	425.00	431.00	6.00	2.97

Cross Lake Minerals Ltd.
News Release – December 10, 2007
Page 2 of 2

The gold mineralization contained within the North Zone is identical and a direct extension of the Main Zone, which was exploited by Kinross, the previous operator of the QR Mine. Approximately 100,000 ounces was mined from the Main Zone, which in size is much smaller than the North Zone. The excellent thickness and grade of the gold intersections from the previous drilling clearly indicates the potential to develop the North Zone from underground. The current drilling and development program will provide the detailed information necessary for engineering and mine planning. The mineralization on the QR Property is classified as a skarn deposit and the shape of the mineralization is variable. As such, until this program is completed, it is difficult to determine the attitude and the true width of the mineralization. Acme Analytical Laboratories Ltd. of Vancouver, B.C. completed all assays by conventional fire assay with the exception of the two holes 474 and 496 which were assayed in the QR Mine assay lab while the mine was in production.

As mining operations continue at the QR Mine, it is part of the longer term mine plan to source future mill feed and extend the life of the mine through development of the North Zone. The QR Project is being supervised by Ross Hollinger P.Eng., Mine Manager and Tom Colbourne P.Eng., Vice President of Mining, who are the designated Qualified Persons and who have reviewed the contents of this news release.
